

Digital Research Alliance of Canada: Project Manuals, Tutorials, and User Guides

Manual B: High-Performance Computing (HPC) User Guide

Overview: This manual introduces utilizing HPC resources provided by the Digital Research Alliance of Canada, guiding users from account setup to job submission.

The purpose of the tutorial: is to help researchers onboard and utilize Canada's HPC resources.

Contents:

1. **Getting Started**
 - Registering for an account via the [Compute Canada Database \(CCDB\)](#).
 - Overview of available systems: Cedar, Graham, Niagara, Narval. [Details on this page.](#)
2. **Accessing HPC Systems**
 - Setting up SSH keys for secure access.
 - Navigating the Linux command line interface.
3. **Job Submission with SLURM**
 - Writing and submitting job scripts.
 - Monitoring and managing jobs using SLURM commands.
4. **Data Management on HPC**
 - Transferring files using SCP and rsync.
 - Understanding storage quotas and file systems.
5. **Software and Modules**
 - Loading and managing software modules.
 - Creating and activating virtual environments. [UBC Dynamic Brain Circuits](#)
6. **Best Practices and Troubleshooting**
 - Efficient resource utilization.
 - Common issues and their resolutions.

Digital Research Alliance of Canada: Project Manuals, Tutorials, and User Guides

1. Getting Started

Register via [CCDB](#) and complete Multi-Factor Authentication.

Systems Available:

- Niagara (Toronto)
- Cedar (SFU)
- Graham (Waterloo)
- Narval & Béluga (Québec)

2. SSH and File Transfer

Sample SSH Command:

```
ssh youruser@narval.alliancecan.ca
```

Copy Files with SCP:

```
scp yourfile.txt youruser@narval.alliancecan.ca:~/projectdir/
```

3. Writing a SLURM Job Script

```
#!/bin/bash
#SBATCH --job-name=fake-news-detection
#SBATCH --time=02:00:00
#SBATCH --gpus=1
#SBATCH --mem=16G

module load python/3.10
source ~/envs/fakenews/bin/activate
python train_model.py
```

Digital Research Alliance of Canada: Project Manuals, Tutorials, and User Guides

4. Monitoring and Efficiency

- Check jobs: `squeue --me`
- Performance summary: `seff JOBID`

Use GNU Parallel for efficiency:

```
parallel -j 4 < tasks.txt
```

5. Best Practices

- Use \$HOME for critical files, \$SCRATCH for temporary data.
- Avoid over-requesting resources.
- Keep job scripts and logs version-controlled (e.g., Git).
